(54) DEVICE FOR PREPARING TRADE MARK REGISTRATION APPLICATION

(57)Abstract:

PURPOSE: To provide a trade mark registration application preparing device capable of automatically printing out work for a specified commodity or the work for the specified commodity and a trade mark on a trade mark registration application.

CONSTITUTION: The trade mark registration application preparing device consists of a specified commodity/work correspondence relation input means 5 for inputting correspondence between a specified commodity and work by an input device 2 and storing the inputted correspondence in a specified commodity/work correspondence relation storing device 10, an application contents input means 6 for inputting a key item, a sort and a specified commodity from an input device 3, retrieving the device 10 by the inputted specified commodity to extract its corresponding work and storing the inputted key item, sort and specified commodity and the extracted work in a application contents storing device 11 and an application output means 7 for inputting a key item from an input device 4, retrieving the device 11 by the inputted key item, extracting its corresponding sort, specified commodity and work and outputting the extracted contents from a printer device 8 as an application.

LEGAL STATUS

[Date of request for examination] 16.02.1996
[Date of sending the examiner's decision of rejection] 09.02.1999
[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]
[Date of final disposal for application]

DETAILED DESCRIPTION

[Detailed Description of the Invention]

[0001]

[Industrial Application] This invention relates to a trademark registration application application listing device.

[0002]

[Description of the Prior Art] The application of trademark application consists of a document (henceforth a "trademark sample") 56 which displayed the trademark which is going to receive classification 51, appointed goods 52, the trademark applicant for registration (he will be a surrogate collectively if there is need) 53, business 54, the table of contents 55 of an attached paper, and trademark registration as shown in drawing 8. The column of business 54 was created with the word processor etc. with classification 51, appointed goods 52, and the trademark applicant for registration (if there is need, he will be a surrogate collectively) 53, the trademark sample 56 was stuck, and submitting to the Patent Office has been performed. And although the publication of the business over appointed goods looks at books, such as "similar goods and service examination criteria", and "***** of a publication of business", and the person in charge was made to indicate it, the business by this help was non-efficiency, and the relation between appointed goods and business is very complicated, the publication of business took skill level, and there was a problem that a written mistake occurred frequently.

[0003] Furthermore, creating with a copy etc. as Masamoto came to be admitted from January 1, Heisei 6, and the creation means of the trademark sample 56 stuck on a trademark registration application application expanded the trademark sample 56.

[0004]

[Problem(s) to be Solved by the Invention] This invention is made in view of an above-mentioned trouble, and the purpose is in offering the trademark registration application application listing device which can print automatically the matter which should be indicated as applications, such as business concerning classification appointed goods and it, in a trademark registration application application. Furthermore, it is in offering the trademark registration application application listing device which can carry out need number-of-sheets printing of the trademark sample of the magnitude which printed automatically the matter which should be indicated as applications, such as business concerning a classification, appointed goods, and it, in the trademark registration application application, and was specified collectively automatically.

[0005]

[Means for Solving the Problem] In order to attain the above-mentioned purpose, this invention takes the next configuration. Namely, the appointed goods which the first invention made input correspondence of appointed goods and business from an input unit, and were inputted and a relation input means corresponding to appointed-goods-business to store correspondence of business in the relation storing means corresponding to appointed-goods-business, While extracting the business which searches said relation storing means corresponding to appointed-goods-business by the

appointed goods which were made to input a key item, a classification, and appointed goods from an input unit, and were inputted, and corresponds The inputted key item, a classification, appointed goods, and a contents input means of application to store the extracted business in the contents storage means of application, The classification and appointed goods which search said contents storage means of application, and correspond from the key item which was made to input a key item from an input unit, and was inputted, and business are extracted, and let the trademark registration application application listing device characterized by consisting of an application output means to output to an airline printer as an application be a summary.

[0006] Moreover, the appointed goods which the second invention made input correspondence of appointed goods and business from an input unit, and were inputted and a relation input means corresponding to appointed-goods-business to store correspondence of business in the relation storing means corresponding to appointed-goods-business, While extracting the business which searches said relation storing means corresponding to appointed-goods-business by the appointed goods which were made to input a key item, a classification, and appointed goods from an input unit, and were inputted, and corresponds The inputted key item, a classification, appointed goods, and a contents input means of application to store the extracted business in the contents storage means of application, The key item which was made to input correspondence of a key item and a trademark mode from an input device, and was inputted, and an image input means to store correspondence of a trademark mode in an image storage means, While extracting the classification and appointed goods which search said contents storage means of application, and correspond from the key item which was made to input a key item from an input unit, and was inputted, and business The trademark mode which searches said image storage means and corresponds is extracted, and let the trademark registration application application listing device characterized by consisting of an application output means to output to an airline printer as an application be a summary.

[0007]

[Example] Hereafter, the example of this invention is explained to a detail, referring to a drawing.

[0008] Drawing 1 is the block diagram showing the configuration of the trademark registration application application listing device which is one example of this invention. This trademark registration application application listing device consists of input units 2, 3, and 4 connected to the computer 1 and the computer 1, an airline printer 8, and information enclosure 9. Furthermore, in the information enclosure 9, the relation enclosure 10 corresponding to appointed-goods-business and the contents storage 11 of application are stored. By computer 1, the relation input means 5 corresponding to appointed-goods-business, the contents input means 6 of application, and the application output means 7 work.

[0009] The relation input means 5 corresponding to appointed-goods-business are appointed goods (a bar code is included.). Correspondence of that it is the same as that of the following, the appointed goods which were made to input correspondence of business using an input unit 2, and were inputted, and business is stored in the relation enclosure 10 corresponding to appointed-goods-business. If they are the inputted receipt number, a classification, appointed goods, and the need, the contents input means 6 of application stores other items and the extracted business in the contents storage 11 of application, while extracting the business which searches the relation enclosure 10 corresponding to appointed-goods-business by the appointed goods which were made to input other items as a key item, for example, a receipt number, a classification, and appointed goods using an input unit 3 when required, and were inputted, and corresponds. If the application output means 7 are the classification and appointed goods which search the contents storage 11 of application by the receipt number which was made to input a receipt number using an input unit 4, and was inputted, and correspond, business, and the need, they will extract other items and will output them to an airline printer 8 as an application.

[0010] The relation enclosure 10 corresponding to appointed-goods-business stores correspondence of the appointed goods and business which are generated by the input from the input unit 2 of said

relation input means 5 corresponding to appointed-goods-business. The file image Fig. of the relation enclosure 10 corresponding to appointed-goods-business is shown in drawing 5. The assignment bar code 21, appointed goods 22, and business 23 are included in the file of the relation enclosure 10 corresponding to appointed-goods-business of drawing 5.

[0011] The contents storage 11 of application stores the extracted business which searches said relation enclosure 10 corresponding to appointed-goods-business by the receipt number generated by the input from the input unit 3 of said contents input means 6 of application, a classification, appointed goods, and the appointed goods inputted as other items when required, and corresponds. The file image Fig. of the contents store 11 of application is shown in drawing 6. If it is a receipt number 31, a bar code 32, appointed goods 33, business 34, and the need, the other items 35 are included in the file of the contents storage 11 of application of drawing 6.

[0012] Next, actuation of the trademark registration application application listing device in this example is explained using the flow chart of drawing 2.

[0013] Beforehand, the correspondence relation between appointed goods and business is inputted using the input unit 2 of the relation input means 5 corresponding to appointed-goods-business, and the correspondence relation between appointed goods and business which inputted is memorized to the relation enclosure 10 corresponding to appointed-goods-business (step 1).

[0014] Next, if there are a receipt number, a classification, appointed goods, and need, other items will be inputted using the input unit 3 of the contents input means 6 of application (step 2). And if appointed goods are inputted, while searching the relation enclosure 10 corresponding to appointed-goods-business (step 3) and extracting and displaying corresponding business, if it is the inputted receipt number, a classification, appointed goods, and the need, other items and the extracted business will be memorized to the contents storage 11 of application (step 4). And when the appointed goods which search the relation enclosure 10 corresponding to appointed-goods-business by appointed goods, and correspond cannot be extracted, an error message is outputted, and it comes (step 5) to wait for reinput.

[0015] Finally, the input unit 4 of the application output means 7 is used, and a receipt number is inputted (step 6). And if a receipt number is inputted, the contents storage 11 of application is searched (step 7), and if it is a corresponding classification and appointed goods, business, and the need, other items will be extracted and it will output to an airline printer 8 as an application 50 (step 8). And when the receipt number which searches the contents store 11 of application by the receipt number, and corresponds cannot be extracted, an error message is outputted, and it comes (step 9) to wait for reinput.

[0016] In addition, although only correspondence of appointed goods and business was memorized in this example, it is not necessary to say that it connects with a classification and you may make it memorize correspondence of a classification, appointed goods, and business.

[0017] Next, it explains per other examples. Drawing 3 is the block diagram showing the configuration of the trademark registration application application listing device which is one example of this invention. This trademark registration application application listing device consists of input units 2, 3, 4, and 12 connected to the computer 1 and the computer 1, 13 airline printers 8, and information enclosure 9. Furthermore, in the information enclosure 9, the relation enclosure 10 corresponding to appointed-goods-business, the contents store 11 of application, and the image store 15 are stored. By computer 1, the relation input means 5 corresponding to appointed-goods-business, the contents input means 6 of application, the image input means 14, and the application output means 7 work.

[0018] The relation input means 5 corresponding to appointed-goods-business are appointed goods (a bar code is included.). Correspondence of that it is the same as that of the following, the appointed goods which were made to input correspondence of business using an input unit 2, and were inputted, and business is stored in the relation enclosure 10 corresponding to appointed-goods-business. If they are the inputted receipt number, a classification, appointed goods, and the need, the contents input

means 6 of application stores other items and the extracted business in the contents storage 11 of application, while extracting the business which searches the relation enclosure 10 corresponding to appointed-goods-business by the appointed goods which were made to input other items as a key item, for example, a receipt number, a classification, and appointed goods using an input unit 3 when required, and were inputted, and corresponds. The image input means 14 stores in the image storage 15 correspondence of the receipt number and trademark which were made to input a trademark from an image scanner 12, were made to input a receipt number from an input device 13, and were inputted. The application output means 7 extracts the classification and appointed goods which search the contents storage 11 of application by the receipt number which was made to input a receipt number using an input unit 4, and was inputted, and correspond, business, and the trademark which searches the image storage 15 and corresponds, and outputs it to an airline printer 8 as an application while extracting other items, if required.

[0019] The relation enclosure 10 corresponding to appointed-goods-business stores correspondence of the appointed goods and business which are generated by the input from the input unit 2 of said relation input means 2 corresponding to appointed-goods-business. The file image Fig. of the relation enclosure 10 corresponding to appointed-goods-business is shown in drawing 5. A bar code 21, appointed goods 22, and business 23 are included in the file of the relation enclosure 10 corresponding to appointed-goods-business of drawing 5.

[0020] The contents storage 11 of application stores the extracted business which searches said relation enclosure 10 corresponding to appointed-goods-business by the receipt number generated by the input from the input unit 3 of said contents input means 6 of application, a classification, appointed goods, and the inputted appointed goods, and corresponds. The file image Fig. of the contents store 11 of application is shown in drawing 6. If it is a receipt number 31, a bar code 32, appointed goods 33, business 34, and the need, the other items 35 are included in the file of the contents storage 11 of application of drawing 6.

[0021] The image store 15 stores correspondence of the receipt number generated by the input from the image scanner 12 and input unit 13 of said image input means 14, and a trademark mode. The file image Fig. of the image store 15 is shown in drawing 7. A receipt number 41 and the trademark mode (image) 42 are contained in the file of the image store 15 of drawing 7.

[0022] Next, actuation of the trademark registration application application listing device in this example is explained using the flow chart of drawing 4.

[0023] Beforehand, the correspondence relation between appointed goods and business is inputted using the input unit of the relation input means 5 corresponding to appointed-goods-business, and the correspondence relation between appointed goods and business which inputted is memorized to the relation enclosure 10 corresponding to appointed-goods-business. In addition, drawing 7 is input screen image drawing 41 of the input device 2 of the relation input means 5 corresponding to appointed-goods-business (step 1).

[0024] Next, if there are a receipt number, a classification, appointed goods, and need, other items will be inputted using the input unit 3 of the contents input means 6 of application (step 2). And if appointed goods are inputted, while searching the relation enclosure 10 corresponding to appointed-goods-business (step 3) and extracting and displaying corresponding business, if it is the inputted receipt number, a classification, appointed goods, and the need, other items and the extracted business will be memorized to the contents storage 11 of application (step 4). And when the appointed goods which search the relation enclosure 10 corresponding to appointed-goods-business by appointed goods, and correspond cannot be extracted, an error message is outputted, and it comes (step 5) to wait for reinput.

[0025] Next, a trademark mode is inputted using the image scanner 12 of the image input means 14, and a receipt number is inputted using the input unit 13 of the image input means 14. In addition, drawing 9 is input screen image drawing 60 of the input device 13 of the image input means 14 (step 6). And if a receipt number is inputted, when the contents storage 11 of application is searched (step

7) and a corresponding receipt number is able to be extracted, a receipt number and a trademark mode will be memorized to the image storage 15 (step 8). (when the receipt number is already registered) And when the receipt number which searches the contents store 11 of application by the receipt number, and corresponds cannot be extracted, an error message is outputted, and it comes (step 9) to wait for reinput.

[0026] Finally, the input unit 4 of the application output means 7 is used, and a receipt number is inputted (step 10). And if a receipt number is inputted, the contents store 11 of application and the image store 15 are searched (step 11), and if it is a corresponding classification and appointed goods, business, and the need, other items and trademark modes will be extracted and it will output to an airline printer 8 as an application 50 (step 12). And when the receipt number which searches the contents store 11 of application by the receipt number, and corresponds cannot be extracted, an error message is outputted, and it comes (step 13) to wait for reinput.

[0027] In addition, in this example, the contents store 11 of application and the image store 15 do not need to say that the unified thing may be used, although expressed as another file. Although he is trying to input a trademark mode from an image scanner 12 furthermore, it is not necessary to say that you may make it create a trademark mode on a screen using CAD etc.

[0028]

[Effect of the Invention] As explained in full detail above, according to this invention, a trademark registration application application can create now easily, and does so the effectiveness of improvement in creation effectiveness, and improvement in dependability. Moreover, prevention of troubles, such as un-receiving at the Patent Office and procedure amendment, before it happens can be aimed at, and it is very useful.

MEANS

[Means for Solving the Problem] In order to attain the above-mentioned purpose, this invention takes the next configuration. Namely, the appointed goods which the first invention made input correspondence of appointed goods and business from an input unit, and were inputted and a relation input means corresponding to appointed-goods-business to store correspondence of business in the relation storing means corresponding to appointed-goods-business, While extracting the business which searches said relation storing means corresponding to appointed-goods-business by the appointed goods which were made to input a key item, a classification, and appointed goods from an input unit, and were inputted, and corresponds The inputted key item, a classification, appointed goods, and a contents input means of application to store the extracted business in the contents storage means of application, The classification and appointed goods which search said contents storage means of application, and correspond from the key item which was made to input a key item from an input unit, and was inputted, and business are extracted, and let the trademark registration application application listing device characterized by consisting of an application output means to output to an airline printer as an application be a summary.

[0006] Moreover, the appointed goods which the second invention made input correspondence of appointed goods and business from an input unit, and were inputted and a relation input means corresponding to appointed-goods-business to store correspondence of business in the relation storing means corresponding to appointed-goods-business, While extracting the business which searches said relation storing means corresponding to appointed-goods-business by the appointed goods which were made to input a key item, a classification, and appointed goods from an input unit, and were inputted, and corresponds The inputted key item, a classification, appointed goods, and a contents input means of application to store the extracted business in the contents storage means of application, The key item which was made to input correspondence of a key item and a trademark mode from an input device, and was inputted, and an image input means to store correspondence of a trademark mode in an image storage means, While extracting the classification and appointed goods which search said contents storage means of application, and correspond from the key item which was made to input a key item from an input unit, and was inputted, and business The trademark mode which searches said image storage means and corresponds is extracted, and let the trademark registration application application listing device characterized by consisting of an application output means to output to an airline printer as an application be a summary.

EXAMPLE

[Example] Hereafter, the example of this invention is explained to a detail, referring to a drawing.

[0008] Drawing 1 is the block diagram showing the configuration of the trademark registration application application listing device which is one example of this invention. This trademark registration application application listing device consists of input units 2, 3, and 4 connected to the computer 1 and the computer 1, an airline printer 8, and information enclosure 9. Furthermore, in the information enclosure 9, the relation enclosure 10 corresponding to appointed-goods-business and the contents storage 11 of application are stored. By computer 1, the relation input means 5 corresponding to appointed-goods-business, the contents input means 6 of application, and the application output means 7 work.

[0009] The relation input means 5 corresponding to appointed-goods-business are appointed goods (a bar code is included.). Correspondence of that it is the same as that of the following, the appointed goods which were made to input correspondence of business using an input unit 2, and were inputted, and business is stored in the relation enclosure 10 corresponding to appointed-goods-business. If they are the inputted receipt number, a classification, appointed goods, and the need, the contents input means 6 of application stores other items and the extracted business in the contents storage 11 of application, while extracting the business which searches the relation enclosure 10 corresponding to appointed-goods-business by the appointed goods which were made to input other items as a key item, for example, a receipt number, a classification, and appointed goods using an input unit 3 when required, and were inputted, and corresponds. If the application output means 7 are the classification and appointed goods which search the contents storage 11 of application by the receipt number which was made to input a receipt number using an input unit 4, and was inputted, and correspond, business, and the need, they will extract other items and will output them to an airline printer 8 as an application.

[0010] The relation enclosure 10 corresponding to appointed-goods-business stores correspondence of the appointed goods and business which are generated by the input from the input unit 2 of said relation input means 5 corresponding to appointed-goods-business. The file image Fig. of the relation enclosure 10 corresponding to appointed-goods-business is shown in drawing 5. The assignment bar code 21, appointed goods 22, and business 23 are included in the file of the relation enclosure 10 corresponding to appointed-goods-business of drawing 5.

[0011] The contents storage 11 of application stores the extracted business which searches said relation enclosure 10 corresponding to appointed-goods-business by the receipt number generated by the input from the input unit 3 of said contents input means 6 of application, a classification, appointed goods, and the appointed goods inputted as other items when required, and corresponds. The file image Fig. of the contents store 11 of application is shown in drawing 6. If it is a receipt number 31, a bar code 32, appointed goods 33, business 34, and the need, the other items 35 are included in the file of the contents storage 11 of application of drawing 6.

[0012] Next, actuation of the trademark registration application application listing device in this example is explained using the flow chart of drawing 2.

[0013] Beforehand, the correspondence relation between appointed goods and business is inputted using the input unit 2 of the relation input means 5 corresponding to appointed-goods-business, and the correspondence relation between appointed goods and business which inputted is memorized to the relation enclosure 10 corresponding to appointed-goods-business (step 1).

[0014] Next, if there are a receipt number, a classification, appointed goods, and need, other items will be inputted using the input unit 3 of the contents input means 6 of application (step 2). And if appointed goods are inputted, while searching the relation enclosure 10 corresponding to appointed-goods-business (step 3) and extracting and displaying corresponding business, if it is the inputted receipt number, a classification, appointed goods, and the need, other items and the extracted business will be memorized to the contents storage 11 of application (step 4). And when the appointed goods which search the relation enclosure 10 corresponding to appointed-goods-business by appointed goods, and correspond cannot be extracted, an error message is outputted, and it comes (step 5) to wait for reinput.

[0015] Finally, the input unit 4 of the application output means 7 is used, and a receipt number is inputted (step 6). And if a receipt number is inputted, the contents storage 11 of application is searched (step 7), and if it is a corresponding classification and appointed goods, business, and the need, other items will be extracted and it will output to an airline printer 8 as an application 50 (step 8). And when the receipt number which searches the contents store 11 of application by the receipt number, and corresponds cannot be extracted, an error message is outputted, and it comes (step 9) to wait for reinput.

[0016] In addition, although only correspondence of appointed goods and business was memorized in this example, it is not necessary to say that it connects with a classification and you may make it memorize correspondence of a classification, appointed goods, and business.

[0017] Next, it explains per other examples. Drawing 3 is the block diagram showing the configuration of the trademark registration application application listing device which is one example of this invention. This trademark registration application application listing device consists of input units 2, 3, 4, and 12 connected to the computer 1 and the computer 1, 13 airline printers 8, and information enclosure 9. Furthermore, in the information enclosure 9, the relation enclosure 10 corresponding to appointed-goods-business, the contents store 11 of application, and the image store 15 are stored. By computer 1, the relation input means 5 corresponding to appointed-goods-business, the contents input means 6 of application, the image input means 14, and the application output means 7 work.

[0018] The relation input means 5 corresponding to appointed-goods-business are appointed goods (a bar code is included.). Correspondence of that it is the same as that of the following, the appointed goods which were made to input correspondence of business using an input unit 2, and were inputted, and business is stored in the relation enclosure 10 corresponding to appointed-goods-business. If they are the inputted receipt number, a classification, appointed goods, and the need, the contents input means 6 of application stores other items and the extracted business in the contents storage 11 of application, while extracting the business which searches the relation enclosure 10 corresponding to appointed-goods-business by the appointed goods which were made to input other items as a key item, for example, a receipt number, a classification, and appointed goods using an input unit 3 when required, and were inputted, and corresponds. The image input means 14 stores in the image storage 15 correspondence of the receipt number and trademark which were made to input a trademark from an image scanner 12, were made to input a receipt number from an input device 13, and were inputted. The application output means 7 extracts the classification and appointed goods which search the contents storage 11 of application by the receipt number which was made to input a receipt number using an input unit 4, and was inputted, and correspond, business, and the trademark which searches the image storage 15 and corresponds, and outputs it to an airline printer 8 as an application while extracting other items, if required.

[0019] The relation enclosure 10 corresponding to appointed-goods-business stores correspondence

of the appointed goods and business which are generated by the input from the input unit 2 of said relation input means 2 corresponding to appointed-goods-business. The file image Fig. of the relation enclosure 10 corresponding to appointed-goods-business is shown in drawing 5. A bar code 21, appointed goods 22, and business 23 are included in the file of the relation enclosure 10 corresponding to appointed-goods-business of drawing 5.

[0020] The contents storage 11 of application stores the extracted business which searches said relation enclosure 10 corresponding to appointed-goods-business by the receipt number generated by the input from the input unit 3 of said contents input means 6 of application, a classification, appointed goods, and the inputted appointed goods, and corresponds. The file image Fig. of the contents store 11 of application is shown in drawing 6. If it is a receipt number 31, a bar code 32, appointed goods 33, business 34, and the need, the other items 35 are included in the file of the contents storage 11 of application of drawing 6.

[0021] The image store 15 stores correspondence of the receipt number generated by the input from the image scanner 12 and input unit 13 of said image input means 14, and a trademark mode. The file image Fig. of the image store 15 is shown in drawing 7. A receipt number 41 and the trademark mode (image) 42 are contained in the file of the image store 15 of drawing 7.

[0022] Next, actuation of the trademark registration application application listing device in this example is explained using the flow chart of drawing 4.

[0023] Beforehand, the correspondence relation between appointed goods and business is inputted using the input unit of the relation input means 5 corresponding to appointed-goods-business, and the correspondence relation between appointed goods and business which inputted is memorized to the relation enclosure 10 corresponding to appointed-goods-business. In addition, drawing 7 is input screen image drawing 41 of the input device 2 of the relation input means 5 corresponding to appointed-goods-business (step 1).

[0024] Next, if there are a receipt number, a classification, appointed goods, and need, other items will be inputted using the input unit 3 of the contents input means 6 of application (step 2). And if appointed goods are inputted, while searching the relation enclosure 10 corresponding to appointed-goods-business (step 3) and extracting and displaying corresponding business, if it is the inputted receipt number, a classification, appointed goods, and the need, other items and the extracted business will be memorized to the contents storage 11 of application (step 4). And when the appointed goods which search the relation enclosure 10 corresponding to appointed-goods-business by appointed goods, and correspond cannot be extracted, an error message is outputted, and it comes (step 5) to wait for reinput.

[0025] Next, a trademark mode is inputted using the image scanner 12 of the image input means 14, and a receipt number is inputted using the input unit 13 of the image input means 14. In addition, drawing 9 is input screen image drawing 60 of the input device 13 of the image input means 14 (step 6). And if a receipt number is inputted, when the contents storage 11 of application is searched (step 7) and a corresponding receipt number is able to be extracted, a receipt number and a trademark mode will be memorized to the image storage 15 (step 8). (when the receipt number is already registered) And when the receipt number which searches the contents store 11 of application by the receipt number, and corresponds cannot be extracted, an error message is outputted, and it comes (step 9) to wait for reinput.

[0026] Finally, the input unit 4 of the application output means 7 is used, and a receipt number is inputted (step 10). And if a receipt number is inputted, the contents store 11 of application and the image store 15 are searched (step 11), and if it is a corresponding classification and appointed goods, business, and the need, other items and trademark modes will be extracted and it will output to an airline printer 8 as an application 50 (step 12). And when the receipt number which searches the contents store 11 of application by the receipt number, and corresponds cannot be extracted, an error message is outputted, and it comes (step 13) to wait for reinput.

[0027] In addition, in this example, the contents store 11 of application and the image store 15 do not

need to say that the unified thing may be used, although expressed as another file. Although he is trying to input a trademark mode from an image scanner 12 furthermore, it is not necessary to say that you may make it create a trademark mode on a screen using CAD etc.

CLAIMS

[Claim(s)]

[Claim 1] The appointed goods which were made to input correspondence of appointed goods and business from an input unit, and were inputted, and a relation input means corresponding to appointed-goods-business to store correspondence of business in the relation storing means corresponding to appointed-goods-business, While extracting the business which searches said relation storing means corresponding to appointed-goods-business by the appointed goods which were made to input a key item, a classification, and appointed goods from an input unit, and were inputted, and corresponds The inputted key item, a classification, appointed goods, and a contents input means of application to store the extracted business in the contents storage means of application, The trademark registration application application listing device characterized by consisting of an application output means to extract the classification and appointed goods which search said contents storage means of application, and correspond from the key item which was made to input a key item from an input unit, and was inputted, and business, and to output to an airline printer as an application.

[Claim 2] The appointed goods which were made to input correspondence of appointed goods and business from an input unit, and were inputted, and a relation input means corresponding to appointed-goods-business to store correspondence of business in the relation storing means corresponding to appointed-goods-business, While extracting the business which searches said relation storing means corresponding to appointed-goods-business by the appointed goods which were made to input a key item, a classification, and appointed goods from an input unit, and were inputted, and corresponds The inputted key item, a classification, appointed goods, and a contents input means of application to store the extracted business in the contents storage means of application, The key item which was made to input correspondence of a key item and a trademark mode from an input device, and was inputted, and an image input means to store correspondence of a trademark mode in an image storage means, While extracting the classification and appointed goods which search said contents storage means of application, and correspond from the key item which was made to input a key item from an input unit, and was inputted, and business The trademark registration application application listing device characterized by consisting of an application output means to extract the trademark mode which searches said image storage means and corresponds, and to output to an airline printer as an application.

(54) 【発明の名称】 商標登録出願願書作成装置

(57) 【要約】 (修正有)

【目的】 指定商品に対する業務を、また指定商品に対する業務と商標を自動的に商標登録出願願書に印刷しうる商標登録出願願書作成装置を提供する。

【構成】 指定商品と業務の対応を入力装置2~4より入力せしめ、入力された指定商品と業務の対応を指定商品-業務対応関係格納装置10に格納する指定商品-業務対応関係入力手段5と、キー項目と分類と指定商品を入力装置より入力せしめ、入力された指定商品により指定商品-業務対応関係格納装置10を検索して対応する業務を抽出すると共に、入力されたキー項目、分類、指定商品、及び抽出された業務を出願内容記憶装置11に格納する出願内容入力手段6と、キー項目を入力装置より入力せしめ、入力されたキー項目より出願内容記憶装置11を検索して対応する分類、指定商品、業務を抽出し、願書として印刷装置8に出力する願書出力手段7と、よりなることを特徴とする。

【特許請求の範囲】

【請求項1】 指定商品と業務の対応を入力装置より入力せしめ、入力された指定商品と業務の対応を指定商品－業務対応関係格納手段に格納する指定商品－業務対応関係入力手段と、

キー項目と分類と指定商品を入力装置より入力せしめ、入力された指定商品により前記指定商品－業務対応関係格納手段を検索して対応する業務を抽出すると共に、入力されたキー項目、分類、指定商品、及び抽出された業務を出願内容記憶手段に格納する出願内容入力手段と、
キー項目を入力装置より入力せしめ、入力されたキー項目より前記出願内容記憶手段を検索して対応する分類、指定商品、業務を抽出し、願書として印刷装置に出力する願書出力手段とからなることを特徴とする商標登録出願願書作成装置。

【請求項2】 指定商品と業務の対応を入力装置より入力せしめ、入力された指定商品と業務の対応を指定商品－業務対応関係格納手段に格納する指定商品－業務対応関係入力手段と、

キー項目と分類と指定商品を入力装置より入力せしめ、入力された指定商品により前記指定商品－業務対応関係格納手段を検索して対応する業務を抽出すると共に、入力されたキー項目、分類、指定商品、及び抽出された業務を出願内容記憶手段に格納する出願内容入力手段と、
キー項目と商標態様の対応を入力装置より入力せしめ、入力されたキー項目と商標態様の対応をイメージ記憶手段に格納するイメージ入力手段と、
キー項目を入力装置より入力せしめ、入力されたキー項目より前記出願内容記憶手段を検索して対応する分類、指定商品、業務を抽出すると共に、前記イメージ記憶手段を検索して対応する商標態様を抽出し、願書として印刷装置に出力する願書出力手段とからなることを特徴とする商標登録出願願書作成装置。

【発明の詳細な説明】

【0001】

【産業上の利用分野】 本発明は、商標登録出願願書作成装置に関する。

【0002】

【従来の技術】 商標出願の願書は図8に示すように分類51と指定商品52と商標登録出願人（必要があれば併せて代理人）53と業務54と添付書類の目録55と商標登録を受けようとする商標を表示した書面（以下「商標見本」という）56からなり、分類51と指定商品52と商標登録出願人（必要があれば併せて代理人）53と業務54の欄をワープロ等により作成し、商標見本56を貼り付け、特許庁へ提出することが行われてきた。そして、指定商品に対する業務の記載は、「類似商品・役務審査基準」と「業務の記載のてびき」等の書籍を見て担当者が記載するようにしていたが、かかる人手による業務は非能率であり、また指定商品と業務の関係は非

常に複雑であり、業務の記載には習熟度を要し、度々記載ミスが発生するという問題があった。

【0003】 更に、商標見本56は平成6年1月1日より正本として、複写等により作成することが認められるようになり、商標登録出願願書に貼付する商標見本56の作成手段が拡大した。

【0004】

【発明が解決しようとする課題】 本発明は上述の問題点に鑑みてなされたものであって、その目的は分類指定商品及びそれに係わる業務等の願書として記載すべき事項を自動的に商標登録出願願書に印刷しうる商標登録出願願書作成装置を提供することにある。更に、分類、指定商品及びそれに係わる業務等の願書として記載すべき事項を自動的に商標登録出願願書に印刷し、併せて指定された大きさの商標見本を自動的に必要枚数印刷しうる商標登録出願願書作成装置を提供することにある。

【0005】

【課題を解決するための手段】 上述の目的を達成するために本発明は次の構成を取る。即ち、第一番目の発明は、指定商品と業務の対応を入力装置より入力せしめ、入力された指定商品と業務の対応を指定商品－業務対応関係格納手段に格納する指定商品－業務対応関係入力手段と、キー項目と分類と指定商品を入力装置より入力せしめ、入力された指定商品により前記指定商品－業務対応関係格納手段を検索して対応する業務を抽出すると共に、入力されたキー項目、分類、指定商品、及び抽出された業務を出願内容記憶手段に格納する出願内容入力手段と、キー項目を入力装置より入力せしめ、入力されたキー項目より前記出願内容記憶手段を検索して対応する分類、指定商品、業務を抽出し、願書として印刷装置に出力する願書出力手段とからなることを特徴とする商標登録出願願書作成装置を要旨とする。

【0006】 また第二番目の発明は、指定商品と業務の対応を入力装置より入力せしめ、入力された指定商品と業務の対応を指定商品－業務対応関係格納手段に格納する指定商品－業務対応関係入力手段と、キー項目と分類と指定商品を入力装置より入力せしめ、入力された指定商品により前記指定商品－業務対応関係格納手段を検索して対応する業務を抽出すると共に、入力されたキー項目、分類、指定商品、及び抽出された業務を出願内容記憶手段に格納する出願内容入力手段と、キー項目と商標態様の対応を入力装置より入力せしめ、入力されたキー項目と商標態様の対応をイメージ記憶手段に格納するイメージ入力手段と、キー項目を入力装置より入力せしめ、入力されたキー項目より前記出願内容記憶手段を検索して対応する分類、指定商品、業務を抽出すると共に、前記イメージ記憶手段を検索して対応する商標態様を抽出し、願書として印刷装置に出力する願書出力手段とからなることを特徴とする商標登録出願願書作成装置を要旨とする。

【0007】

【実施例】以下、本発明の実施例を図面を参照しながら詳細に説明する。

【0008】図1はこの発明の一実施例である商標登録出願願書作成装置の構成を示すブロック図である。本商標登録出願願書作成装置は、コンピュータ1とコンピュータ1に接続された入力装置2、3、4、印刷装置8、情報格納装置9より構成される。さらに、情報格納装置9内には指定商品-業務対応関係格納装置10、出願内容記憶装置11が格納されている。コンピュータ1では

指定商品-業務対応関係入力手段5、出願内容入力手段6、願書出力手段7が稼動する。

【0009】指定商品-業務対応関係入力手段5は、指定商品（商品コードを包含する。以下同様）と業務の対応を入力装置2を用いて入力せしめ、入力された指定商品と業務の対応を指定商品-業務対応関係格納装置10に格納する。出願内容入力手段6は、キー項目、例えば受付番号と分類と指定商品と必要であればその他の項目を入力装置3を用いて入力せしめ、入力された指定商品により指定商品-業務対応関係格納装置10を検索して対応する業務を抽出すると共に、入力された受付番号、分類、指定商品、必要であればその他の項目、及び抽出された業務を出願内容記憶装置11に格納する。願書出力手段7は、受付番号を入力装置4を用いて入力せしめ、入力された受付番号により出願内容記憶装置11を検索して対応する分類、指定商品、業務、必要であればその他の項目を抽出し、願書として印刷装置8に出力する。

【0010】指定商品-業務対応関係格納装置10は、前記指定商品-業務対応関係入力手段5の入力装置2よりの入力により発生する指定商品と業務の対応を格納する。図5に指定商品-業務対応関係格納装置10のファイルイメージ図を示す。図5の指定商品-業務対応関係格納装置10のファイルには指定商品コード21、指定商品22、業務23が含まれる。

【0011】出願内容記憶装置11は、前記出願内容入力手段6の入力装置3よりの入力により発生する受付番号、分類、指定商品、必要であればその他の項目と、入力された指定商品により前記指定商品-業務対応関係格納装置10を検索して対応する抽出された業務を格納する。図6に出願内容記憶装置11のファイルイメージ図を示す。図6の出願内容記憶装置11のファイルには、受付番号31、商品コード32、指定商品33、業務34、必要であればその他の項目35が含まれる。

【0012】次に、本実施例における商標登録出願願書作成装置の動作を図2のフローチャートを用いて説明する。

【0013】予め、指定商品と業務の対応関係を、指定商品-業務対応関係入力手段5の入力装置2を用いて入力し、入力した指定商品と業務の対応関係を、指定商品

-業務対応関係格納装置10に記憶する（ステップ1）。

【0014】次に、受付番号と分類と指定商品と必要があればその他の項目を出願内容入力手段6の入力装置3を用いて入力する（ステップ2）。そして指定商品が入力されると、指定商品-業務対応関係格納装置10を検索して（ステップ3）、対応する業務を抽出し表示すると共に、入力された受付番号、分類、指定商品、必要であればその他の項目、及び抽出された業務を出願内容記憶装置11に記憶する（ステップ4）。そして、指定商品により指定商品-業務対応関係格納装置10を検索して対応する指定商品が抽出できない場合にはエラーメッセージを出力し、再入力待つようになる（ステップ5）。

【0015】最後に、受付番号を願書出力手段7の入力装置4を用いて入力する（ステップ6）。そして受付番号が入力されると、出願内容記憶装置11を検索して（ステップ7）、対応する分類、指定商品、業務、必要であればその他の項目を抽出し、願書50として印刷装置8に出力する（ステップ8）。そして、受付番号により出願内容記憶装置11を検索して対応する受付番号が抽出できない場合にはエラーメッセージを出力し、再入力待つようになる（ステップ9）。

【0016】尚、本実施例では指定商品と業務の対応のみを記憶するようにしたが、分類と関係づけて、分類と指定商品と業務の対応を記憶するようにしても良いことは云うまでもない。

【0017】次に、他の実施例につき説明する。図3はこの発明の一実施例である商標登録出願願書作成装置の構成を示すブロック図である。本商標登録出願願書作成装置は、コンピュータ1とコンピュータ1に接続された入力装置2、3、4、12、13印刷装置8、情報格納装置9より構成される。さらに、情報格納装置9内には指定商品-業務対応関係格納装置10、出願内容記憶装置11、イメージ記憶装置15が格納されている。コンピュータ1では指定商品-業務対応関係入力手段5、出願内容入力手段6、イメージ入力手段14、願書出力手段7が稼動する。

【0018】指定商品-業務対応関係入力手段5は、指定商品（商品コードを包含する。以下同様）と業務の対応を入力装置2を用いて入力せしめ、入力された指定商品と業務の対応を指定商品-業務対応関係格納装置10に格納する。出願内容入力手段6は、キー項目、例えば受付番号と分類と指定商品と必要であればその他の項目を入力装置3を用いて入力せしめ、入力された指定商品により指定商品-業務対応関係格納装置10を検索して対応する業務を抽出すると共に、入力された受付番号、分類、指定商品、必要であればその他の項目、及び抽出された業務を出願内容記憶装置11に格納する。イメージ入力手段14は、商標をイメージスキャナ12より入

力せしめ、受付番号を入力装置13より入力せしめ、入力された受付番号と商標の対応をイメージ記憶装置15に格納する。願書出力手段7は、受付番号を入力装置4を用いて入力せしめ、入力された受付番号により出願内容記憶装置11を検索して対応する分類、指定商品、業務、必要であればその他の項目を抽出すると共に、イメージ記憶装置15を検索して対応する商標を抽出し、願書として印刷装置8に出力する。

【0019】指定商品-業務対応関係格納装置10は、前記指定商品-業務対応関係入力手段2の入力装置2よりの入力により発生する指定商品と業務の対応を格納する。図5に指定商品-業務対応関係格納装置10のファイルイメージ図を示す。図5の指定商品-業務対応関係格納装置10のファイルには商品コード21、指定商品22、業務23が含まれる。

【0020】出願内容記憶装置11は、前記出願内容入力手段6の入力装置3よりの入力により発生する受付番号、分類、指定商品、入力された指定商品により前記指定商品-業務対応関係格納装置10を検索して対応する抽出された業務を格納する。図6に出願内容記憶装置11のファイルイメージ図を示す。図6の出願内容記憶装置11のファイルには、受付番号31、商品コード32、指定商品33、業務34、必要であればその他の項目35が含まれる。

【0021】イメージ記憶装置15は、前記イメージ入力手段14のイメージスキャナ12と入力装置13よりの入力により発生する受付番号と商標態様の対応を格納する。図7にイメージ記憶装置15のファイルイメージ図を示す。図7のイメージ記憶装置15のファイルには受付番号41、商標態様(イメージ)42が含まれる。

【0022】次に、本実施例における商標登録出願願書作成装置の動作を図4のフローチャートを用いて説明する。

【0023】予め、指定商品と業務の対応関係を、指定商品-業務対応関係入力手段5の入力装置を用いて入力し、入力した指定商品と業務の対応関係を指定商品-業務対応関係格納装置10に記憶する。尚、図7は指定商品-業務対応関係入力手段5の入力装置2の入力画面イメージ図41である(ステップ1)。

【0024】次に、受付番号と分類と指定商品と必要があればその他の項目を出願内容入力手段6の入力装置3を用いて入力する(ステップ2)。そして指定商品が入力されると、指定商品-業務対応関係格納装置10を検索して(ステップ3)、対応する業務を抽出し表示すると共に、入力された受付番号、分類、指定商品、必要であればその他の項目、及び抽出された業務を出願内容記憶装置11に記憶する(ステップ4)。そして、指定商品により指定商品-業務対応関係格納装置10を検索して対応する指定商品が抽出できない場合にはエラーメッセージを出力し、再入力待つようになる(ステップ

5)。

【0025】次に、商標態様をイメージ入力手段14のイメージスキャナ12を用いて入力し、受付番号をイメージ入力手段14の入力装置13を用いて入力する。尚、図9はイメージ入力手段14の入力装置13の入力画面イメージ図60である(ステップ6)。そして受付番号が入力されると、出願内容記憶装置11を検索して(ステップ7)、対応する受付番号が抽出できた場合(受付番号がすでに登録されている場合)には受付番号と商標態様をイメージ記憶装置15に記憶する(ステップ8)。そして、受付番号により出願内容記憶装置11を検索して対応する受付番号が抽出できない場合にはエラーメッセージを出力して、再入力待つようになる(ステップ9)。

【0026】最後に、受付番号を願書出力手段7の入力装置4を用いて入力する(ステップ10)。そして受付番号が入力されると、出願内容記憶装置11及びイメージ記憶装置15を検索して(ステップ11)、対応する分類、指定商品、業務、必要であればその他の項目、及び商標態様を抽出し、願書50として印刷装置8に出力する(ステップ12)。そして、受付番号により出願内容記憶装置11を検索して対応する受付番号が抽出できない場合にはエラーメッセージを出力し、再入力待つようになる(ステップ13)。

【0027】尚、本実施例では出願内容記憶装置11とイメージ記憶装置15は別ファイルとして表現しているが、一体化したものでも良いことは言うまでもない。さらに商標態様をイメージスキャナ12より入力するようにしているが、商標態様をCAD等を用いて画面上で作成するようにしても良いことは言うまでもない。

【0028】

【発明の効果】以上詳述したように、本発明によれば商標登録出願願書が容易に作成できるようになり、作成効率の向上、信頼性の向上という効果を奏する。また、特許庁における不受理、手続補正等のトラブルの未然防止が図れ、頗る有用である。
